

# Comp-Utility Corporation

## Power Quality

CUC offers a comprehensive power quality product line. Our capabilities range from simple surge protection, to AC and DC power boards, to UPS and generator backup systems. In late 1992, CUC researched the marketplace to select only those systems that show the ability to perform the desired function: to improve the electric utility's performance. New manufacturers are evaluated regularly. Basic selection criteria for UPS systems included surge suppression on bypass to ensure protection even when the UPS is not functioning properly, quality batteries, service/repair capabilities and manufacturer financial strength. Consultation with an Account Manager is recommended to select the appropriate technology and size for a given application. Get a jump start on your CUC consultation by reviewing the CUC Load Worksheet.

The best way to see how CUC can solve all of your facility needs is to **request a site survey.**
